Arc provides end-to-end SAP support, including user assistance/ ticket processing, system administration, troubleshooting, and ongoing enhancements

SAP Modules

Arc delivers projects across various SAP modules, including SAP FI/CO (Finance and Controlling), MM (Materials Management), SD (Sales & Distribution), and more.

Digital Transformation

A „must-have" for every organization

The essence of smart automation in simple steps:

- Review key areas and processes, considering existing IT tools and the business's specifics.

- Identify opportunities for process improvement beyond RPA, such as changes to core system configurations or usage.

- Provide a list of suggested changes and an implementation roadmap that aligns with business priorities, including documentation and process maps for both current and future states.

- Define an implementation strategy and select the right RPA technologies.
