Kabar's vision

KABAR throughout last years developed from an electrical contractor into a **comprehensive technology provider**, by connecting the best experts in their fields, that have a broader point of view **how the real estate market** within the scope of buildings' technology should look like and have a desire to be the part of the real estate industry decarbonization process.

We as the team believe that each building should be approached individually as it is an individual self-being. **Technology should be developed and adjusted to how the building performs.**

Kabar's mission

Our mission is to support our clients in delivering future proof buildings with the focus on their energy efficiency and CO2 emissions.

We see ourselves as a partner that has that broader approach, not only a contractor, but an advisor that supports clients in choosing the best solutions without overspecifying above actual demands.

We introduce new quality and communication standards, develop our teams and solutions that allow to perceive properties as consistent, intelligent entirety.
